

2015 Hong Kong 3D GIS Summit

This Year Our Topic is “Creation and Application of Smart City As Well As Localisation of the Technology in Hong Kong”.

In this year's event, we will see how the remarkable improvement of 3D GIS technology being apply in every aspects of city development. From 3D city model generation by oblique photogrammetry to sharing such sophisticated model in mobile devices as well as internet browser with spatial analysis capability, audiences will know how the world's most success and longest history of 3D GIS is being used in the industry. Presenters from overseas and our local moderator will demonstrate how such integrated 3D application can be used in Hong Kong. New local 3D modelling examples generated by this most popular city modelling approach will be shown. Live demo applications are available for first hand user experiences in the venue.

Using such integrated solution we can model, classify and map all the UBW in Hong Kong within 18 months?

Modelling of UBW in Tai Chung at Taiwan by using UAV & 3D GIS

Why not try our freeware to share the derived 3D building models with the inspection team?

Why not take a look of this most sophisticated GIS BIM integrated application?

Why not use the modeled result to analyse the severity of the UBW and to decide enforcement priority?

Do you know this approach is fully automatic and remote processing to avoid confrontation?

You will find the answers in our event.

Registration, agenda and presenters bio will send in January 2015.

Event Schedule:

Date:	16 th Jan 2015 (Friday Afternoon)
Time:	1:30pm to 6:30pm
Venue:	3/F, Salon VI-V, Hoi Yat Heen
Location:	Harbour Plaza Hotel, No. 665 King's Road, North Point, Hong Kong
Audience (s):	Departments of the Hong Kong Government
Admission Fee:	Free
Enquiry Email:	enquiry@ambit-geospatial.com.hk

Why AMBIT is the best choice?

AMBIT is one of the best independent geospatial consultant companies, having developed a tradition of excellence in providing professional GIS services to government and a broad range of industries throughout Hong Kong and internationally. Delivering of a good GIS relies not only on IT developer's experience but also on recognition to user workflows, characteristics of different spatial data models and strengths of different GIS software. Throughout these years our GIS team had worked together with various engineering expertise using innovative spatial technology to resolve project challenges. With decades of success of our staffs in multi-disciplinary GIS services in engineering, environment, planning as well as water applications, we can provide the most cost effective and objective geospatial solutions to our clients.
